

29.8

① Datos

$$r = 75 \text{ cm } (-0.057 \text{ s}^{-1})t$$

$$B(t) = 1.4 \text{ T}$$

$$N = 1$$

②

$$\mathcal{E}_i = -N \frac{d\phi_B}{dt}$$

③

se debe colocar el vector  $\vec{dS}$ , notar que la componente paralela del vector  $B$  no aporta al flujo de  $B$

$$\sin \theta = \frac{B_y}{B}$$

$$B_y = B \sin 60$$

$$\textcircled{4} \quad \phi_B = \int \vec{B} \cdot \vec{dS} = \int B_y dS \cos \phi = B_y \int dS \cos \phi = B_y S = B_y \pi r^2$$

$$\phi_B = (B \sin 60)(\pi r^2) = B(0.86)(3.14)(0.5625) = 1.518 B$$

$$\textcircled{5} \quad \mathcal{E}_i = - \frac{d\phi_B}{dt} = - \frac{d}{dt} (1.518)(1.4) e^{(-0.057)t}$$

$$= (1.518)(1.4)(0.057) e^{(-0.057)t}$$

$$\mathcal{E}_i = 0.12 \text{ V}$$
